

HAMZA RAFIQUE

Senior Software Quality Assurance Engineer

Kuala Lumpur, Malaysia | humzarafique99@gmail.com | linkedin.com/in/hamza-rafiq-18902a1ba

EXECUTIVE SUMMARY

Senior Software Quality Assurance Engineer with 4.5+ years of experience leading software quality activities across healthcare, e-commerce, industrial analytics, social/dating applications, and AI-based solutions. Strong background in end-to-end QA ownership, manual testing, test automation, release validation, defect lifecycle management, and Agile collaboration for web, Android, iOS, and enterprise platforms. Skilled in Playwright, Katalon Studio, Appium, Python, Postman, Jira, and structured QA documentation, with a proven record of creating QA processes, test artifacts, RTMs, regression coverage, and release-readiness practices from scratch. Currently pursuing a Master of Information Technology at Universiti Kuala Lumpur (UniKL MIIT).

RECRUITER-FOCUSED VALUE

- End-to-end QA ownership across requirement analysis, test planning, test case design, regression execution, UAT, release validation, and production readiness.
- Hands-on web and mobile testing experience across Android, iOS, web administration, OMS, healthcare portals, and enterprise platforms.
- Automation exposure across Playwright with TypeScript, Katalon Studio, Appium with Groovy, and practical regression improvement initiatives.
- Strong documentation discipline, including Test Plans, Test Scenarios, Test Cases, RTMs, test execution records, defect reports, and QA validation summaries.

CORE EXPERTISE

Manual Testing | Automation Testing | Web Testing | Mobile Testing | Android | iOS | Functional Testing | Regression Testing | Smoke Testing | Sanity Testing | Integration Testing | Exploratory Testing | UAT | Cross-Browser Testing | Compatibility Testing | Release Validation | Defect Lifecycle Management | Requirement Analysis | Test Planning | Test Case Design | Test Scenario Design | RTM Creation | Jira | Agile Scrum | Sprint Planning | Daily Scrum | Postman | Playwright TypeScript | Katalon Studio | Appium Groovy | Python | Healthcare | E-Commerce | Industrial Analytics | Social/Dating Platforms | AI-Based Computer Vision

PROFESSIONAL EXPERIENCE

Jazi Information Technology | Riyadh, Saudi Arabia | Oct 2025 - Jan 2026

Senior Software Quality Assurance Engineer

Worked as a Senior QA Engineer for an enterprise e-commerce ecosystem, supporting quality assurance across web, Android, iOS, and Order Management System (OMS) applications while collaborating with developers, UI/UX, and cross-functional team members in an Agile environment.

- Established a structured QA process by creating Test Plans, RTMs, Test Scenarios, Test Cases, regression test suites, and test execution documentation from scratch.
- Owned manual testing for web, Android, iOS, and OMS applications, covering functional, regression, smoke, sanity, integration, exploratory, UAT, cross-browser, and mobile testing across multiple releases.
- Performed pre-production validation by verifying features, integrations, and regression scenarios before deployment, supporting release readiness through detailed QA validation and defect verification.
- Reported, tracked, and validated defects using the existing Jira workspace while collaborating with front-end and back-end developers to verify fixes, document execution results, validate critical user journeys, and communicate release risks before production deployment.

Elusa Health | Lahore, Pakistan | Sep 2024 - Jul 2025

Software Quality Assurance Engineer

Worked as one of five QA Engineers responsible for software quality across Commander, the organization's core healthcare platform supporting multiple configurable healthcare solutions. Performed comprehensive manual testing for enterprise web applications and selected Android and iOS applications while collaborating with Agile teams to deliver reliable healthcare software.

- Independently owned the complete QA lifecycle for two healthcare client portals, including test case design, QA documentation, functional testing, regression testing, defect management, UAT, and final quality validation before client delivery.
- Validated complex role-based healthcare workflows involving doctors, patients, managers, regional managers, area managers, province managers, and district managers, ensuring accurate functionality, permissions, business rules, and data visibility.
- Reported, tracked, and validated defects using Jira while performing occasional API request and response verification with Postman to support functional testing and defect investigation.
- Collaborated with developers, UI/UX designers, project managers, business development, and QA engineers during sprint planning, daily Scrum meetings, requirement discussions, and delivery planning.

Devigital Systems | Lahore, Pakistan | Sep 2021 - Jul 2024

Associate Software Quality Assurance Engineer

Joined Devigital Systems as an Associate Software Quality Assurance Engineer and progressed into high-ownership QA responsibilities across two US-based commercial products. Built a strong foundation in manual testing, automation, client collaboration, and complete QA lifecycle ownership for web and mobile applications.

Spot.Love - US-Based Dating Platform

- Served as the sole QA Engineer within a three-member delivery team, independently owning the complete QA lifecycle for Android, iOS, and web administration applications from requirement analysis through production validation.
- Created all testing artifacts from scratch, including Test Plans, Test Scenarios, Test Cases, and RTMs, and executed functional, regression, smoke, sanity, exploratory, integration, compatibility, cross-browser, mobile, and UAT across Stage, Pre-Production, and Production environments.
- Introduced automation after identifying efficiency opportunities, developing mobile automation using Katalon Studio and Appium with custom Groovy keywords, followed by web automation for the administration portal.
- Participated in daily Scrum meetings, sprint planning, client discussions, and release validation, delivering the project successfully and receiving client appreciation for maintaining high software quality.

Linus Analytics - US-Based Industrial Analytics Platform

- Contributed as one of two QA Engineers within a six-member delivery team, supporting quality for an industrial analytics platform focused on inventory, materials, machinery, and operational workflows.
- Executed manual testing while collaborating on Playwright automation using TypeScript, supporting reliable regression testing and efficient software delivery.
- Created Test Plans, Test Scenarios, Test Cases, and RTMs from scratch while reporting and tracking defects through Jira and validating new features and defect resolutions.

PROFESSIONAL LEADERSHIP

- Independently trained, mentored, and guided more than 20 aspiring Software Quality Assurance professionals, helping them develop industry-ready testing skills and begin their careers in Software Quality Assurance.
- Designed and delivered practical training covering manual testing, test planning, test case design, defect reporting, Agile methodologies, automation fundamentals, interview preparation, and real-world software testing practices.
- Guided junior QA learners through practical exercises, real project examples, and interview-focused preparation to build confidence and job-ready testing skills.

EDUCATION, CERTIFICATIONS & LANGUAGES

Master of Information Technology (In Progress) - Universiti Kuala Lumpur (UniKL MIIT), Malaysia | 2026 - Present
